

**EN ISO 11200:1995**

**Acoustics - Noise emitted by machinery and equipment - Guidelines for the use of basic standards for the determination of emission sound pressure levels at a work station and at other specified positions**

Provides brief summaries of the basic International Standards for determining emission sound pressure levels from all types of machinery at work station and at other specified locations and gives guidance on the process of selection. The guidance given does apply only to airborne sound.
